A system adapted to cellular coverage

A multilingual and easy-to-use system

Local and available customer service

Affordable

Gas waste reduction

Compact and durable equipment

Proof of time spent on the job

Non-authorized use notifications

ORCA is a comprehensive and integrated fleet control tool using localization and GPS vehicle tracking online. Through cellular waves, the system transmits all the information deemed necessary by the fleet's owner.

ORCA is a small, green box that can be installed on all types of vehicles. It can be configured remotely and according to your needs. For example, the engine will turn off automatically and safely once it has been idling uselessly for the period of time of your choice.

In addition, the vehicle will restart automatically when the battery reaches a certain level, when the vehicle's inside temperature reaches a predefined minimum or maximum, etc.

Any company having to manage a fleet of vehicles can use the patented **ORCA** system by **Geothentic**.

Our products are used all over the world and in all types of industries!

The data collected by the **ORCA** system and made available on the online interface facilitate trip, maintenance, and personnel management, and using the system will save you a lot of money and improve your company's image.

We will adapt our system to your needs; all you have to do is let us know what they are.

The **ORCA** system has many advantages: your vehicles will use less gas, wear less quickly, and emit less in greenhouse gases!
