SIGNIFICANT SAVINGS

Administrative time

- **Limit the time of use** of the platform. The module being proactive, it provides cost savings right after installation, and not just by doing passive management from data analysis.
- Each data is available in **less than three clicks** and the platform is very **intuitive**.

Working hours

- The module validates the real time spent at the client's location to make sure to pay the exact number of hours and bill customers correctly.
- The module provides a better overview of the trips and stops made.

Maintenance fees

- Our web platform provides a Maintenance menu. This menu is used to manage the maintenance of the fleet vehicles. It is possible to manage the maintenance **by period, mileage and/or by engine hours**.
- This menu allows fleet managers to ensure that no maintenance is performed late or in advance. All maintenances will be done on time, **limiting vehicles' wear and tear**.

Gas

- **Idle killer**: Geothentic's patented idle killer system automatically and safely turns off the engine of an unnecessary idling vehicle, after a customer-determined time.

*According to Natural Resources Canada, one hour of idling represents a \$10 loss in gas and maintenance fees.

- **Excess speeding**: With Geothentic's Speed Alert, it is possible to limit speeding and thus reduce fuel costs.

*At a speed of 120 km/h, a vehicle consumes about 20% more fuel than if it was running at 100 km/h.

- **Professional/Personal trips**: With the Orca module, fleet managers can see each trip, allowing them to better manage their fleet.

2

IMPROVING FLEET MANAGEMENT

- Real time localization ;
- Management reports (idling time, speeding, driving report by driver, ...);
- Proactive options to help managers (speed alert, idle killer, automatic restart, ...);
- Maintenance management.
